

The All-in-One

Low-Code No-Code^{!!!} Work Platform

Clean up your messy middle with
the Power of Simple.

The **messy middle** of enterprise applications

As you transform your core frontend and backend systems, the mess in the middle becomes more obvious.

The middle is the chaotic tangle of internal operations handled with spreadsheets, emails, scripts, third-party tools, and shadow IT.

Yet the messy middle is where the differentiating power of digital transformation can make the most impact.

Kissflow brings the Power of Simple to building enterprise applications.

Reusable components

No-code/
low-code

IT
governance

**Start measuring time-to-value
in weeks, not months**

What can you do with **Kissflow**?

Build custom solutions across a wide range of types of work management with Kissflow

App Development

Modernize, customize, automate, and integrate enterprise-grade apps

Workflow Management

Automate and deploy simple to complex workflows in minutes with a no-code builder

Case Management

Handle ticketing and support requests on quick and powerful boards

Project Management

Adopt a modern approach to project management with the highest visibility

Process Orchestration

Connect, coordinate, and merge RPA systems with human interactions

Collaboration

Keep conversations about work in the same place where the work happens

The Kissflow Work Platform

Kissflow combines both low-code and no-code tools to manage the widest range of work.

App Builder

Build fully customizable apps with dashboards, roles, pages, workflows, and more.

Process Builder

Build, simulate, deploy, and run complex human-centric workflows with a no-code module

Boards

Gain full visibility and flexibility for a case and project management with custom views

Governance

Approve applications, control data access, manage users, and review audit reports

The screenshot displays the 'Audit log' section of the Kissflow platform. It features a sidebar with navigation options like 'Account administration', 'Account settings', 'Account details', 'Account customization', 'Connected domains', 'Format settings', 'Weekends & holidays', 'File upload settings', 'Geolocation settings', 'Account security', 'User management', 'User provisioning', 'Group management', 'Task delegation', 'Flow settings', 'Audit log' (selected), and 'Subscription & billing'. The main area shows a table of audit events with columns for Audit ID, Timestamp, Actor, Action, Object, Event category, and Platform. The table lists various actions performed by users like 'Flobot' and 'Sally S' on objects such as 'vendor', 'LCNC', and 'Sally S'. At the bottom, it indicates 'Rows per page: 25' and 'Showing 1 to 25 out of 151 entries'.

Audit ID	Timestamp	Actor	Action	Object	Event category	Platform
AUD-99800435393319...	06/01/23, 7:35 pm	Flobot	Performed an action	vendor	Unclassified event	Mac Os

Integrations

Keep data moving inside and outside of Kissflow with prebuilt or custom connectors

Analytics

Bring in data from across the platform to identify new areas for transformation

A Glimpse of what you can **Build with Kissflow**

Who **benefits** from Kissflow?

1

CIO's

- Move faster on digital transformation
- Save budget by shifting simpler apps away from over-priced platforms

2

Developers

- Build applications in days with composable blocks
- Reduce time spent on simple applications

3

Functional heads

- Get the exact functionality required without compromising
- Create unique experiences for multiple roles

4

Business analysts

- Build applications as you go with no-code
- Make changes quickly in minutes

5

End users

- Elegant, modern layouts for applications
- Get feature requests built quickly
